Unit 3 — The Environment, Locally

Track E · Klasse 9 · Niveau E

Learning objectives I

- *I can read a short environment text and identify cause and effect.*
- *I can use if + present, will-future* (first conditional) for predictions.
- *I can write a 120-word local environment proposal.*

Lead-in I

Naima's class is mapping the litter on a 200-metre stretch of street outside the school. They are using a clipboard, a tally chart, and one rather reluctant volunteer who brought gloves. After three days they have 412 plastic items, 201 paper items, and one extremely confused fox who wants to know what they're doing.

Vocabulary I

- pollution
- litter
- recycling
- single-use plastic
- compost
- emissions
- carbon footprint
- biodiversity
- habitat
- extinction
- sustainable
- renewable

Vocabulary I

- local authority
- council
- petition
- campaign

Reading I

Vocabulary — environment
pollution, litter, recycling, single-use plastic, compost, emissions, carbon footprint, biodiversity, habitat, extinction, sustainable, renewable, local authority, council, petition, campaign.

Grammar — first conditional
Form: *If* + present simple, *will* + base verb.

- *If we keep the chart, we will see the trend.*
- *If the council acts, the litter will decrease.*
- *Won't* in the result: *If we do nothing, things won't change.*

Practise I

Niveau E — controlled

1. Build first conditional: *(if / we / map / litter) / (we / understand / problem)* → ___ .
2. Match: pollution → litter; compost → biodegradable waste; recycling → reuse.

Niveau E — productive

3. Build 4 first-conditional sentences about a local environment fix.

Your turn I

Local proposal, 120 words. Write to the school or local council about a fixable environment issue near your school. Use 3 first conditionals + 2 advice structures.

Sample

Dear Local Council, our class has counted 412 plastic items over 200 metres of street near our school. If you place two more bins along this stretch, the count will probably halve. If the bins are emptied weekly, they won't overflow. We would also ask that the school be invited to do a yearly count, so we can track whether the change is real. If we measure twice a year, we will know whether small actions actually work, and the next class won't have to start again.

Reflect I

- I can identify cause-and-effect in an environment text.
- I can use first conditionals correctly.
- I can write a 120-word local proposal.
